Introduction To Internet Security From

Internet security is a branch of computer security specifically related to not only Internet, often involving browser security and the World Wide Web, but also network security as it applies to other applications or operating systems as a whole. Its objective is to establish rules and measures to use against attacks over the Internet. The Internet represents an insecure channel for exchanging information, which leads to a high risk of intrusion or fraud, such as phishing, online viruses, trojans

Internet security - Wikipedia

Internet security refers to securing communication over the internet. It includes specific security protocols such as: Internet Security Protocol (IPSec) Secure Socket Layer (SSL) Internet Security Protocol (IPSec) It consists of a set of protocols designed by Internet Engineering Task Force (IETF). It provides security at network level and helps to create authenticated and confidential packets for IP layer.
