Spinal Lesions: Symptoms, Causes, Diagnosis, and Treatment

Central cord syndrome is commonly caused by a traumatic spinal cord contusion, posttraumatic syringomyelia, or a medullary spinal tumor. This lesion tends to affect pathways that are in the immediate vicinity of the central portion of the spinal cord, and the symptoms differ depending on the size of the lesion.

Spinal Cord Transverse Lesion - an overview ...

A spinal cord injury — damage to any part of the spinal cord or nerves at the end of the spinal canal (cauda equina) — often causes permanent changes in strength, sensation and other body functions below the site of the injury. If you've recently experienced a spinal cord injury, it might seem like every aspect of your life has been affected.

causes - Mayo Clinic

Incomplete spinal cord syndromes are caused by lesions of the ascending or descending spinal tracts that result from trauma, spinal compression, or occlusion of spinal arteries. Central cord syndrome, anterior cord syndrome, posterior cord syndrome, and Brown-Séquard syndrome are the most common types of incomplete spinal cord syndromes.

Incomplete spinal cord syndromes - Knowledge for medical ...

Conus medullaris syndrome is a secondary form of spinal cord damage resulting from injuries to the lumbar vertebrae. The conus medullaris is the bundled, tapered end of the spinal cord nerves. Situated near the first two lumbar vertebrae, the conus medullaris ends at the cauda equina, a bundle of spinal nerves and nerve roots.
