Many agile tools (like Jira Software) track story points, which makes reflecting on and re-calibrating estimates a lot easier. Try, for example, pulling up the last 5 user stories the team delivered with the story point value 8. Discuss whether each of those work items had a similar level of effort. If not, discuss why.

What are story points and how do you estimate them?

A User Story describes a feature, or requirement, that is to be implemented and is independent of a specific tool (i.e. JIRA, Rally, Trello, etc.). User stories are employed in various Agile frameworks including Scrum, Kanban, and Extreme Programming.
