The Mathematics of Lenses We have already learned that a lens is a carefully ground or molded piece of transparent material that refracts light rays in such a way as to form an image. Lenses serve to refract light at each boundary. As a ray of light enters a lens, it is refracted; and as the same ray of light exits the lens, it is refracted again.

Refraction of Light

pages 485-492 page

487 1. A laser beam in

air is incident upon

Access PDF Refraction And Lenses Study

ethanol at an angle of incidence of 37.0° .

What is the angle of refraction? $n_1 \sin \theta_1 = n_2 \sin \theta_2$
 $1 \sin 37.0^\circ = 1.36 \sin \theta_2$
 $\sin \theta_2 = \frac{1 \sin 37.0^\circ}{1.36}$
 $\theta_2 = 26.3^\circ$
2. Light in air is incident upon a piece of crown glass at an angle of ...

Reflection And
Refraction Study Guide
Answers Refraction.

Refraction occurs when

Acces PDF Refraction And Lenses Study

light travels from one medium into another (i.e. from air into water). Refraction is the changing of direction of light due to the changing speed of light. Refraction occurs toward the normal when light travels from a medium into a denser medium.

Lenses

A lens that is thicker at the center than the edges. When it is surrounded by material with a lower index of refraction, such as air, it refracts parallel light rays so that they all pass through a common point (focal point), after going through the lens. Often called a converging lens.

Acces PDF Refraction And Lenses Study

The following experiments will demonstrate the principle of refraction with a convex lens and a concave lens. An optics bench is used to align the lenses and objects in a straight line for better viewing. These activities will enhance the scientific skills of observing, measuring and controlling variables.
